

FlowSync – SLA Policy

1. Overview

This document defines the Service Level Agreement (SLA) policy for FlowSync, a B2B SaaS productivity platform.

It outlines uptime guarantees, response time commitments, breach definitions, and compensation rules.

This policy is used by support agents, engineering teams, and AI-driven systems to prioritize incidents, detect SLA violations, and trigger escalation workflows.

2. Uptime Guarantees

2.1 Standard Uptime Commitment

- FlowSync guarantees **99.9% monthly uptime** for Pro and Business plans
- Enterprise plans may include custom uptime guarantees (up to 99.99%)

2.2 Downtime Definition

Downtime is defined as:

- Complete service unavailability
- Severe API failure preventing core functionality
- Authentication system failure affecting login

2.3 Exclusions from Uptime Calculation

- Scheduled maintenance (announced in advance)
- User-side connectivity issues

- Third-party provider outages (Slack, Google, etc.)
-

3. Response Time Expectations

3.1 Support Response Targets

Severity	Definition	Response Time
P0	Critical system outage	15 minutes
P1	Major feature disruption	30–60 minutes
P2	Partial degradation	4 hours
P3	Minor issue / inquiry	1–3 business days

3.2 Engineering Response Targets

- P0 incidents: Immediate escalation to on-call engineers
 - P1 incidents: Investigation within 30 minutes
 - P2 incidents: Scheduled within same day
 - P3 incidents: Included in sprint backlog
-

4. SLA Breach Definitions

An SLA breach occurs when:

4.1 Uptime Breach

- Monthly uptime falls below agreed threshold (e.g., 99.9%)

4.2 Response Delay Breach

- Support or engineering response exceeds defined SLA timelines for severity level

4.3 Resolution Delay Breach

- Incident resolution exceeds expected resolution window for critical systems

4.4 Repeated Incident Breach

- Same issue occurs multiple times without permanent fix
-

5. Compensation Rules

5.1 Standard Compensation Model

When SLA breach is confirmed:

- 99.0% – 99.9% uptime: Service credit up to 10%
- 95.0% – 99.0% uptime: Service credit up to 25%
- Below 95.0% uptime: Service credit up to 50%

5.2 Compensation Types

- Account credit (preferred method)
- Subscription extension
- Partial refund (in exceptional cases)

5.3 Eligibility Conditions

Compensation applies only if:

- Customer is on paid plan
 - Breach is verified by monitoring system
 - Incident is not caused by customer misconfiguration
-

6. Enterprise SLA Exceptions

Enterprise customers may have custom SLA agreements including:

- 99.95% – 99.99% uptime guarantees
- Dedicated support channels
- Faster response times (P0 response under 5–10 minutes)
- Custom compensation terms defined in contract

Enterprise SLA overrides standard policy where applicable.

7. Monitoring & Detection

FlowSync uses automated monitoring systems to track:

- API latency
- Error rates
- System uptime
- Authentication failures

When thresholds are exceeded:

- Incident is automatically created
 - SLA risk is evaluated
 - Escalation workflows are triggered
-

8. Escalation Rules

8.1 Automatic Escalation

- P0 incident detected → Immediate engineering escalation
- Uptime breach risk → Incident classification upgrade
- Enterprise SLA impact → Priority escalation queue

8.2 Manual Escalation

Triggered by support agents when:

- Customer reports business-critical disruption
- Multiple failed recovery attempts occur

- SLA breach is suspected but not confirmed
-

9. Customer Communication Rules

During SLA-impacting incidents:

- Provide transparent status updates
 - Avoid technical jargon in customer-facing messages
 - Share estimated resolution time (if available)
 - Update regularly until resolution
-

10. AI System Usage (Agentic Integration)

This document is used by AI agents to:

- Detect SLA breach conditions automatically
 - Prioritize tickets based on severity and impact
 - Trigger escalation workflows for P0/P1 incidents
 - Recommend compensation actions
 - Differentiate between standard issues and SLA-impacting incidents
-
